Document 1 [JP, 10-127289, A (Takeda Chemical Industries, Ltd.) 19 May 1998 (19.05.98)] cited in the international search report describes a screening method for compounds that promote or inhibit orphan receptor function by bringing a test compound (a) into contact with cells expressing an orphan receptor and measuring the reduction in the amount of nonspecific binding to obtain compounds that have agonist activity and then bringing a test compound different from the obtained compound that has agonist activity into contact with the cells expressing the orphan receptor. However, none of the documents cited in the international search report describes or suggests screening for compounds that promote or inhibit orphan receptor function by predicting ligand candidates based on the common structures of compounds having agonist activity and comparing the results obtained by bringing the predicted substances into contact with the orphan receptors with the results obtained by bringing a test compound (b) into contact with the orphan receptors.
